

InNoPlastic

CLEAN-up month

We invite all interested citizens, companies, associations and clubs to join us in cleaning island beaches.
Only together we can make the island of Krk waste-free!

In-No-Plastic (Innovative approaches towards prevention, removal and reuse of marine plastic litter) is a three year EU funded project with the goal to develop and demonstrate nano-, micro-, and macro-plastic clean-up technologies in the aquatic ecosystems. Part of the plastic gathered at the demo sites will be treated for reusability by investigating different recycling methods, leading to the inter-connectedness of the processes in acquiring plastic waste and creating circularity in the value chain. Croatian partner handles monitoring, clean-up and processing of microplastic.

Twice a year during clean-up activities ocean plastic will be separately collected and reused for filamen production. In summer season recycled filamen will be used in 3D printing demonstrations in all of island's municipalities.

MAY 2022

Project Duration:
October 2020 – October 2023

Project Budget:
€ 7.4 million

Funding Source:
EU Horizon2020 GA: 10100612

Project Partners:
SINTEF, Empower, ArcelorMittal, Probotica, Ponikve, Sensum, EdF, NanoBay, Venice Lagoon Plastic Free, BlueXPRT, DOW, FishFlow Innovations, H2O Biofouling Solutions BV, Uniper, Dutch Caribbean Nature Alliance, University POLITEHNICA of Bucharest, Rivers Trust
